DATA SHEET

CHLOR*RID DTS™ (Direct-to-Surface)

DESCRIPTION: CHLOR*RID DTS is an organic bonding chemical blend which aids in the removal of chlorides, sulfates and nitrates and most other soluble salts; contains no volatile organic compounds (VOC's) and is biodegradable.

USES: CHLOR*RID DTS is recommended as a hand wash solution prior to application of primers or coatings on a variety of surfaces, including ferrous and nonferrous metals, wood, plastics, and others. For a full list contact manufacturer.

SURFACE PREPARATION: Best surface preparation yields the best results. If hydrocarbons are present, they should be removed prior to salt removal. Barrier materials, such as rust or scale or delaminated coatings should be removed prior to salt removal. Sufficient mechanical force may be utilized so barrier materials are removed as part of salt removal procedures.

APPLICATION: Application methods vary. See Directions.

Before and after cleaning a small sample area, test the surface for contamination. Rewash as necessary and retest to assure desired cleanliness is achieved. It is not necessary to use the entire contents. Partially filled containers should be tightly closed.

EQUIPMENT CLEANUP: Flush with clean fresh water.
